

**Purpose:** To define how GHG Permit data amendments are to be notified to the Agency

**Supporting Documents:** IRL ETS 005/1 Greenhouse Gas Emission Permit Data Amendment form.

**Types of amendments:**

1. Revision of baseline emissions data;
2. Revision of CO<sub>2</sub> emission point(s);
3. Revision of raw materials or fuels giving rise to CO<sub>2</sub>.

**1. Baseline emissions data:**

Amendments may arise due to

- Incorrect / inappropriate variables in emissions calculations
- Omissions of fuel or raw materials giving rise to CO<sub>2</sub>
- Omissions/inaccuracies in fuel or raw materials 'usage' data.

**Corrective action:**

Operator should use form IRL ETS 005/1 to notify the **additional changes** to the Agency as soon as possible after the baseline verification meeting and by the date agreed with the inspector.

**2. CO<sub>2</sub> emission points:**

Amendments may arise due to

- Omission of existing plant and emission points at time of application e.g. Fire pumps or LPG burners
- Omission of Directly Associated Activities giving rise to CO<sub>2</sub>.

**Corrective action:**

Operator should use form IRL ETS 005/1 to notify the **additional changes** to the Agency as soon as possible after the baseline verification meeting and by the date agreed with the inspector. Where necessary the historical emissions data must be revised.

Note: For *new* emission points and/or combustion plant the form IRL ETS 006/1 should be used.

**3. Additional fuels or raw materials giving rise to CO<sub>2</sub>**

- Omission from the original permit application form of fuels or raw materials giving rise to CO<sub>2</sub>.

**Corrective action:**

Operator should use form IRL ETS 005/1 to notify the **additional changes** to the Agency as soon as possible after the baseline verification meeting and by the date agreed with the inspector. The historical emissions data must be revised if the additional fuels or raw materials were not included in the previously submitted data.
